1-Day Course

Wireless & Broadband Network Security Risks

Bring your wireless Laptop, PDA or Mobile Phone and experience your security risk

Nowadays people have a need to get connected “24-hours” to access information on the internet or to connect to their own companies network.

Also people access the network at remote locations when traveling, like hotels, coffee-shops, restaurants.

Sometimes wireless networks are provided at service apartments or you install it at home yourself.

In most situations people do not realize the security risks in broadband and wireless environments and are openly exposed to viruses, data-loss and hackers.

For example intruders can access the wireless network while sitting more than 500 meters away !

Wireless & Broadband Networks

- Overview of Wireless & Broadband Networks – Business Drivers
- Overview of Wireless & Broadband Technologies (WiFi 802.11a/b/g/i, WiMax, GPRS, CDMA)
- Understand the implementations of:
 - Company Networks
 - Telecom Networks
 - Home Networks
 - Hotel Networks
- Overview of applications running over a Wireless & Broadband network

Live Wireless Security Risk Demonstration

- Security Risks – which data can be seen on a wireless network ?
- What data can be seen from your wireless laptop !
- How easy can your data on your laptop be accessed ?

Security Risks and Solutions

- Why is Security Important ?
- How do you minimize your security risk for your:
 - Company
 - Customers (Telco, Hotel network)
 - Home Network
 - Your own Laptop
- Understand Security products
 - Firewalls, Switches, Routers, Intrusion Detection Systems, VPNs, Anti-Virus, Ad-ware, WEP, WPA
- Solutions and Tools to minimize:
 - Access to your laptop
 - Data loss + Protection
